

# Datiphy Management Center (DMC)

Datiphy Enterprise Solutions are composed of Datiphy Smart Agents and Datiphy Management Center (DMC). Datiphy Smart Agents are responsible for collecting data and forward the data to DMC for computing, classifying, retrieving, and storing. DMC provides real-time compliance, alerting and reporting functions. It gives a holistic view of the environment insight into risk behaviors, access anomalies, vulnerabilities and threats against data access. It also provides information on the correlations of users and entities behaviors to give a full spectrum of data audit trails. Syslog and Email alerts can be forwarded to the IT monitoring platform and Security Operations Center (SoC). Automated reports can be generated on a pre-defined interval and sent to designated individual or a group of people. Datiphy’s patented technology DatidNA incorporates machine-learning and pattern-matching technologies to help enterprises secure the most sensitive data against internal and external threats. Datiphy DMC deployment and management are fast and easy; it supports on-premises, private and public clouds.

Report Type	Templates
Compliance	GDPR, HIPAA, PCI, ISO27001, FSI Audit, Personal Data Audit .
Security	Threat Intelligence, Security Audit
Performance	Performance Intelligence Capacity Planning, Performance Audit
Operation	Asset, Status, Timeline, ..

## Key Features and Benefits

- ✓ Easy deployment and centralized Management
- ✓ Audit, Compliance, Security, and Performance all-in-one
- ✓ Out-of-box templates with flexible policies and rules for customization
- ✓ Cost saving, easy to scale up
- ✓ Friendly dashboard with auto alerts and mobile apps
- ✓ High Availability and load balancing available
- ✓ Ready to integrate with 3<sup>rd</sup> party platform
