

Datiphy Forensic Center

Datiphy Forensic Center is a security hardened software that can be deployed on physical servers, VM, or in cloud. Complementary to Datiphy Enterprises Security Solutions, Datiphy Forensic Center may restore audit data on-demand or periodically by one or multiple Datiphy Data Management Centers (DMC) allowing users to conduct in-depth analysis of selected audit data and generate reports based on search and analytic results.

Archived data are processed as metadata which sensitive records are masked to comply with data protection regulations.

Key Features and Benefits

- ✓ Audit data is archived periodically (hourly and daily) to ensure no data loss and data integrity.
- ✓ Selected archived data (by hours and days) may be restored by a single command to streamline time-consuming and labor-intensive operations.
- ✓ Fully compatible with Datiphy Enterprise Security Platform, no new learning curve required.
- ✓ Generate on-demand reports based on Google-like search results.
- ✓ Simplify big data analysis by supporting on-demand restoring and exporting selective audit data to 3rd party big data platform
- ✓ Archived data are processed metadata; sensitive records are masked to comply with data protection regulations.
