SIGN IN

The default admin account login password for the first time is the EC2 Instance ID where SDP is installed.

Please enter the AWS EC2 management interface first to view the Instance ID.

The screenshot shows the AWS Management Console interface for an EC2 instance. At the top, there is a breadcrumb navigation: [EC2](#) > [Instances](#) > [i-0f4955b8a831aa4a3](#). Below this, the main heading is **Instance summary for i-0f4955b8a831aa4a3 (DemoDmc)**, with a subtext 'Updated 2 minutes ago'. Under the heading, there is a section for 'Instance ID' which contains a copy icon and the text 'i-0f4955b8a831aa4a3 (DemoDmc)'. The instance ID 'i-0f4955b8a831aa4a3' is highlighted with a red rectangular box.

After successfully logging into SDP, you can go to System → Account to change the admin password.
